For the listeners

A

Listening along is free and needs no app

All you need is your own phone and headphones.

How it works

1. **Scan the first QR code.** The camera app is enough. Your phone connects to the wifi.
2. **Scan the second QR code.** This opens the page.
3. **Choose your language** and tap „Listen“.
4. **Put on your headphones.**

The first time takes a while

The very first connection can take **up to a minute** before the page appears. That is normal. Please wait and **do not reconnect** — reconnecting starts the check over and makes it take longer.

"No internet" — that is fine

***5G„ or “LTE* may still show at the top. **That is correct and not a fault — the translation comes over the wifi.**

Your phone may show an exclamation mark or the message „No internet“. That is true: this wifi leads nowhere. It exists only to carry the sound from the hall to your phone. **Please stay connected anyway.**

If the sound stutters

- **The screen stays on by itself.** Some phones stop playback when the screen turns off — so the page keeps it on as soon as you have tapped it once. You can switch this off under **More → Keep screen on**. It has not been tried on an iPhone yet: if it causes trouble there, switch it off and keep the screen on by hand.
- **Dim the screen.** The screen has to stay on — it does not have to stay bright. The **Dimmer** button in the bar at the bottom darkens the page in two steps; sound and text carry on unchanged.
- **Use headphones.** Through the loudspeaker the microphone at the front picks up the translation and translates it again.
- **Check the side switch on an iPhone.** If it is set to silent, nothing will be heard.

The translation is made by a computer

It is produced during the sermon, automatically, and may contain errors. The spoken word remains authoritative.

Some languages are marked „experimental“. For those, the church terms have not yet been reviewed by a native speaker.

Supporting the project

Would you like to support the project? There is no need — as a pastor I am already carried by your tithe. If you would still like to give something, please donate to the church. Under „Thank you“ on the page you will find a bank QR code; the amount in it is only a suggestion and can be changed in your banking app.

Was it clear?

The bar at the bottom has a **More** entry. Behind it are two buttons: „clear“ and „hard to follow“. One tap is enough, and you can change it. Only the totals per language are counted — **not** which phone, and **not** when. It is the one piece of feedback that costs nothing, and it shows which language still needs work.

Telling us something

Under **More** in the bar at the bottom there is „Report“. One sentence is enough — is a language missing, is the sound too quiet? The sound desk sees it immediately. You will not get a reply; there is no time for that during the service.

Privacy

At the very bottom of **More**, small next to „Close“, there is „Privacy“. In short: everything stays on the computer in the hall — no cloud, no account, no app. Nothing is stored, unless the church switches on a recording of the sermon; you will then see that on your phone. The full version is there too. „(Draft, pending approval by the data protection officer.)“
